A long-term strategic partnership has driven integration between the latest Bosch intrusion control panels and the Genetec unified security platform, Security Center. The result is an integrated video and intrusion monitoring platform that improves the security of people, resources and assets.

Operators benefit from seamless control of security devices, as they can leverage Security Center to monitor intrusion panels using the same client application as the Genetec video surveillance solution. This allows viewing of video that is linked to intrusion areas, events and alarms for video verification, which helps to reduce false alarms. Intrusion alarms can also be automatically pushed to smartphones via the Genetec mobile app to keep operators connected regardless of location.

Security personnel can control areas and view Bosch B and G Series panel status information from within the Security Center client to simplify management. Security Center users can also set up automated actions to turn on the intrusion system based on time or Security Center system events, as well as program Security Center outputs to trigger control panel alarms. A single view and one client for controlling devices and handling system events simplifies management and increases operator efficiency.

Education
From elementary schools to university campuses, educational institutions throughout North America leverage Genetec and Bosch intrusion solutions to enhance student safety.

Energy and Utilities
Protect assets and the community with Bosch intrusion solutions and Genetec. Improve efficiency by receiving all security data in one platform to keep property and people safe.

Retail
Big box and franchise location personnel benefit from receiving video information tied to intrusion system alarms, alerting them to store events that require immediate intervention.

Government
Government facilities perform a wide range of functions and face daunting security challenges. Solutions from Bosch and Genetec ensure the security and safety of employees and visitors.

Key features

**Autodiscovery of intrusion system entities**
Simplify integration as Security Center automatically scans for intrusion system points, areas, inputs and outputs

**Federated video of intrusion panels**
Centrally monitor intrusion panels connected to remote independent Security Center systems as one virtual system

**Real-time status monitoring**
View panel status — turned on, turned off or in alarm

**Manual or automatic control**
Manually turn areas on or off from the Security Center client or set up automated actions based on time or system events

**Event monitoring**
View trouble, duress, alarms and other custom events in Security Center and silence intrusion alarms

**Video verification**
View video linked to intrusion areas, events and alarms for complete facility information

Configuration

Change the name of inputs and outputs in Security Center and the information is automatically pushed to the control panel

Generate intrusion reports for a single panel or across all panels with historical events and alarms linked with video

The Bosch division Security Systems is a leading global supplier of security, safety, and communications products, solutions and services. Protecting lives, buildings and assets is our aim. The product portfolio includes video surveillance, intrusion detection, fire detection and voice evacuation systems as well as access control and management systems. Bosch Security Systems develops and manufactures in its own plants across the world. Additional information can be accessed at [www.boschsecurity.com](http://www.boschsecurity.com)
